Detailed Action

1. This action is responsive to communications: Application, filed on 03/19/04.

Allowable Subject Matter

2. Claims 2-12, 14-19, 22-31 and 33-40 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
3. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach and/or suggest "a constraint parser that interprets and converts the currency constraint into a form usable by the query optimizer . . . constructs a query plan for executing the query . . . subplan selection operators that check a currency of a local replica against a query's currency constraint . . . wherein the query processing engine executes the query plan . . . a result that satisfies the query's currency constraints."

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1, 13, 20-21, and 32 are rejected under 35 U.S.C. 102(b) as being anticipated by Carey et al., US# 20010049685.

As per claims 1, 13, 20-21, and 32, Carey et al. teaches "a constraint parser that interprets and converts the currency constraint into a form usable by the query optimizer; a query plan generator that constructs a query plan for executing the query, wherein the plan includes one or more subplan selection operators that check a currency of a local replica against the query's currency constraint" (see abstract and paragraph [0096] and [0097]) "selects the subplan using the local replica only when the constraint is met; and wherein the query processing engine executes the query plan, including the subplan selection operators, thereby producing a result that satisfies the query's currency constraints" (see paragraph [0177] and [0190]).
